

## REPLACEMENT CARTRIDGE FOR DEMINERALIZATION FOR P120SYX

Cartridge for water treatment with a high content of salts and gypsum; reduces chlorides, sulphates and gypsum present in drinking water in certain geographical areas. Flow 300 l / h. Filtering capacity 5000 liters (depending on the water quality). Recommended positioning of the by-pass of the head if used with mixed ovens: 0. Recommended for BX82-BX122-AT82-AT122-AT201-AT202-FX82-FX122-FX201-FX202 ovens.

---

### Functional features

- Filter with integrated self-supporting structure, for the demineralization of the water intended for the generation of steam in large ovens.
- Effective multi-stage filtration process, which solves the problems that some types of aggressive water cause to the internal glass of the cooking chamber; at the same time it prevents the formation of limescale in the ovens; retains metal ions, such as lead and copper.
- The length of the filter depends on the incoming water and the degree of bypass set in the head.
- To know the filtration capacity data, consult the material available or the Angelo Po marketing dpt.
